(54) Title: DEVICE TO RECEIVE TOOLS FOR THE CALIBRATION OF WORKPIECES AND PRESS WITH SUCH A DE-
VICE

(57) Abstract: The device serves to receive a tool for calibrating of work-
pieces (83), preferably workpieces manufactured by a powder metallurgi-
cal process. On the example shown the tool comprises the lower stamps
(77, 78, 79) and the upper stamps (80, 81, 82) located on tool supports (31,
32, 33; 31', 32', 33'). These stamps may be moved up and down individ-
ually or together parallel to the axis (40). Also movable up and down is
the tool support (41) on which, if required, a center pin (85) is mounted.
The device is particularly suitable for the calibration of complicated work-
pieces, such as represented for example by the workpiece (83) having the
form of a body of rotation.
